

## CLAIMS

What is claimed is:

1. A rubber composition comprising at least a surfactant containing a thio functionality.

5

2. The rubber composition of Claim 1, wherein the surfactant further comprises a thioether.

3. The rubber composition of Claim 2, wherein the surfactant further comprises an 10 ether thioether of the formula:

4. An elastomer based rubber composition comprising per 100 parts of elastomer, and

15 about 0.02-10 parts of a surfactant containing a thio functionality.

5. An elastomer based rubber composition comprising per 100 parts of elastomer, and

about 0.02-10 parts of an thioether surfactant.

20

6. The rubber composition of Claim 4, wherein the elastomer has unsaturation in the polymer backbone.

7. The rubber composition of Claim 4 wherein the surfactant is an ether thioether 25 of the formula:

8. A vulcanized tire sidewall comprising based on 100 part of elastomer and about 0.02-10 parts of a surfactant containing a thio functionality.

30

9. A tire comprising a vulcanized sidewall component comprising a sulfur-containing surfactant.

10. A method of forming a film on the exposed surface of vulcanized rubber, comprising;

5 adding about 0.02-10 parts of a surfactant containing a thio functionality to a rubber composition,

curing said rubber composition,

exposing the cured rubber composition to ozone.
